first published in 1987 the book is to give insight into the multisided relationship of hemostatic systems and malignancies and to help biomedical scientists and practicing clinicians obtain a better understanding of cancer research

over the past decade many of the key lymphokines hormones and growth factors that help regulate the immune system have been defined these molecules termed biological response modifiers brms have been sequenced synthesized and produced in large enough quantities to test in animals and humans resulting in the development of new approaches to the treatment of human disease in particular cancers and infectious diseases advances in this area have also led to rethinking therapies against a range of autoimmune disorders and other diseases associated with immune and endocrine imbalances brms currently are being applied clinically as both primary and adjunctive therapy to enhance the effectiveness of traditional treatments by

maximizing their activities and to protect critical tissues against intolerable chemotherapeutic and radiation damage present constraints against the use of brms revolve around the nature of these substances in vivo where many of their actions and the majority of their interactions and synergies remain to be elucidated for example as these molecules are thought to exert their effects locally the systemic administration of lymphokines cytokines and growth factors at doses adequate to produce a wanted anti tumor effect in many instances is intolerably toxic efforts to overcome this formidable problem have led scientists to begin to explore the transfer of genes known to encode for these molecules into cells which otherwise inadequately elicit or produce anti tumor or anti infective responses

this book provides a comprehensive overview on the clinical issues and biology of acute promyelocytic leukemia apl and on the molecular mechanisms of targeted therapy with atra and ato the text covers major topics such as the pathophysiology of apl coagulopathy biologic and clinical differences between children and adults with apl and the role of minimal residual disease monitoring additionally the book summarizes historical current and future treatment strategies in both adults and children while highlighting the most recent therapeutic recommendations for relapsed disease and the evolving indications for autologous and allogeneic stem cell transplant this volume also features chapters focusing on secondary apl and therapy late effects rare presentations such as apl in the elderly and during pregnancy and rare apl variants that may represent therapeutic challenges written by top experts in the field acute promyelocytic leukemia a clinical guide is a valuable resource for clinicians and researchers who treat and investigate this disease in children and adults
